

APP GUIDE

1

START TRACKING

Launch the AccessOutdoors app and verify that your GPS/cellular signal is turned on. Now you can hit the [“Start Tracking”](#) button and begin your journey.

2

ADD RATINGS

Start each trail by adding your first mark for terrain. Tap the [“+”](#) button to add points and ratings along the trail. You can add ratings for terrain quality, amenities, access points, points of interest, hazards and closures. Select the feature that you are rating from the list, give it an accessibility score, add photos and write a short description.

3

BACKUPS

Periodically backup your ratings to the cloud using the upload button in the lower left corner of your screen. This ensures you don't lose any of your hard work if you get disconnected from cellular signal.

4

FINISH

When you are finished tracking, hit the [“Stop Tracking”](#) button. You will have the option to resume tracking or completely STOP and upload your progress.
